Lab 1 Submission
Introduction to Software Project Management

A. Basic Information

Group No.	1
Project Title	Abhinay: Film Production Networking & Casting Platform
Client Representative	Arjun (202452308)

Management Team Role Allocation

Role	Student Name / Roll No.
Project Manager	Ishan (202452321)
Assistant Project Manager	Happy (202452319)
Scope & Requirements Manager	Priyadarshini (202452324)
Estimation & Cost Manager	Yuvraju (202452325)
Schedule Manager	Abhishek (202452339)
Resource & Communication Manager	Triya (202452338)
Risk Manager	Nikitha (202452336)
Quality Manager	Himanshu (202452320)
Configuration & Change Manager	Kshithesh (202452329)

B. Problem Statement

The film industry currently lacks a centralized platform that brings together directors, producers, actors, camera operators, editors, and other crew for professional networking and hiring. Casting activity today is scattered across informal contacts, social media, and disconnected job boards, making it hard for producers and casting directors to efficiently discover suitable talent, and equally hard for actors and crew to find work that matches their skills and availability. Application tracking, audition scheduling, and project/crew coordination are largely manual, leading to delays, lost communication, and limited visibility into who is working on what. There is a need for a unified web platform that combines a professional network with an end-to-end casting marketplace and lightweight production management tools, so film professionals can build a portfolio, discover opportunities, hire talent, and manage projects in one place.

C. Initial Client Objectives / Expectations

- Allow film professionals across all roles (directors, producers, actors, camera operators, editors, and other crew) to create rich profiles with portfolios, reels, photos, and resumes/CVs.
- Enable producers and directors to post casting roles with description, requirements, compensation, and location, and let actors/crew browse and apply for suitable opportunities.

- Support real-time communication and self-tape/video submissions so casting directors and applicants can coordinate and conduct auditions asynchronously or live.
- Let producers/directors track applications through defined statuses (Applied, Shortlisted, Selected, Rejected) and organize projects with linked cast and crew pages.
- Provide administrative oversight of the platform through content moderation, credit verification, and a mechanism to handle user reports and disputes.

D. Major Users / Stakeholders

- Directors and Producers — post casting roles, review and shortlist applicants, hire crew, and manage production/project pages.
- Actors, Camera Operators, Editors and Other Crew — build professional profiles, browse and apply to roles, upload self-tapes, and network with industry peers.
- Casting Directors / Casting Associates — manage high-volume casting calls, filter and shortlist applicants, and coordinate screenings.
- Platform Administrators — moderate postings and media, verify credits, and resolve user reports.
- Client Representative (Arjun) — represents the project's requirements and expectations to the development team.
- Project/Development Team — responsible for designing, developing, and delivering the system.
